Art Unit: 1631

**DETAILED ACTION**

1. The art unit designated for this application has changed. Applicants(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 1, drawn to a system for annotating sets and subsets of genes, classified in class 702, subclass 19.
  - II. Claims 2 and 3, drawn to a system for evaluating the quality of gene clustering, classified in class 702, subclass 19.
  - III. Claims 4-6, drawn to a computer method of clustering gene expression data, classified in class 702, subclass 19.
3. Inventions of groups [I, II] and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant application, the computer system of groups I and II may be utilized in the distinct usages as needed in Group III, method of clustering gene expression data. Alternatively, the said computer system may be utilized as needed in a method for automating a high throughput screening (HTS) protocol and storing the generated HTS data. All of these usages are distinct as requiring distinct and different functions and results thereof without overlapping search due to different subject matter. This lack of overlapping searches documents the undue search burden if they were search together.

Art Unit: 1631

4. The inventions of Groups I and II are distinct inventions because they are different computer systems requiring specific limitations for achieving their intended utilities. Group II differs from Group I because Group II requires training subsets, a means for calculating the fractions of documents and a means for measuring central tendencies to achieve the intended utility of evaluating the quality of gene clustering. Group I does not require the above listed limitations in order for the claimed invention of Group I to achieve its intended utility of annotating sets and subsets of genes. It is acknowledged that the commonality of the two groups is the data contained in each system. However, the different processing means for achieving their intended utilities causes the inventions to be distinct. Therefore, the distinct inventions support the undue search burden if they were examined together.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157
